CSP Certified

At Cased Dimensions, our mission is a simple one. We enable our customers to improve their organizations by bringing improvements and automation to their existing processes.

This means getting work done takes less time and consumes fewer resources. Working with Cased Dimensions reduces errors and resultant re-work. We embed process in a systemic way, rather than relying on people's or institutional memory. We are able to do this in a way that enables our customers to adapt their processes in the future without having to pay for expensive software development and changes. This is achieved by combining our expert people, our own software and the latest in Microsoft technology.

We've delivered our process consulting coupled with our technology services for twelve of the world's largest companies, who, as a result, have benefited from better business processes at a lower cost.

We also deliver compliant secure services for the UK Government and Defence Services, meaning information security is ingrained in everything that we do.

As process is enabled through technology, we help clients achieve the most value possible from technology investments. This normally means helping clients to move to SaaS operating models whilst closing datacentres and removing legacy applications.

We have developed our own Intellectual Property "Fluids365" to help clients fast track SaaS adoption.

As a Microsoft Alliance Partner, we receive special access to Microsoft's technologies and services at least six months before they reach market. We also have direct access to Microsoft's product and services team in Redmond, Washington. That puts us way ahead of the competition when it comes to ensuring that Microsoft's capabilities can meet your needs. In fact, Microsoft's own consulting practice often use Cased Dimensions to deliver to their clients.

Cased Dimensions Works with the following:

Some of our clients using Cased Dimensions include:

The Cased Dimensions business structure is centred around three core service units, supported by internal business operations. Our three primary service units are:

Consulting

Our Consulting team works with customers to architect and then implement new automated processes, using off-the-shelf technologies where possible. We also leverage Microsoft Azure and other SaaS offerings to ensure client compliance and rapid value.

Process consulting normally aligns to HR, Finance and Technology departments.

Cased Dimensions also help clients where the client has already designed a Business Process and wishes to engage a technology partner to scope and then move that business to a Cloud Model. These are mostly SaaS operating models but could also include DRaaS, IaaS or PaaS.

Development

Our Development team are skilled to understand any configuration and developments necessary to deliver client requirements. Our team have deep expertise in Microsoft Dynamics365, Azure Microservices and Power BI.

We have developed our own Robotic Process Automation (RPA) Self-Service product (www.fluids365.com) to help our customers make best use of Microsoft Dynamics365 and other existing applications.

Support Services - Managed Services & Cloud Support

Our Support Services team are skilled and equipped to run any in-life services for you, with a variety of support models available to choose from. This team delivers services ranging from the support of single standalone systems, through to running a complete outsourced infrastructure including Asset Management, Application Management, Database Management and Network Management.

We operate a 20,000 square foot IT Asset Management (ITAM) centre where we help client's image and build systems to ensure a productive, error-free, in-life experience with their IT equipment.
